

Artemone

STORAGE UNITS

2024

Antonio Citterio

Description

Artemone is a storage unit that stems from desire to update the traditional dresser found in kitchens. It is available in different combinations of hinged doors and drawers, with or without flap down door, and can be fitted with shelves, pull-out trays and cutlery racks. The different types share the lightness of the base design, separated from the upper part by a shadow gap of a few millimetres that makes the structure visually lighter. The base in die-cast aluminium is available in an array of finishes to match the upper part which is offered in shellac or wood.
