

Tesa O'

COMPLEMENTS

2024

Monica Armani

Description

Tesa O' is a shading element conceived as a style statement and a versatile solution for outdoor spaces, an object that combines aesthetics and functionality in an exemplary manner. The lenticular shape is embellished with an organic straw effect made of high-quality plastic material. The size of the sunshade and the aluminium pole with a 360-degree swivel joint, which allows it to be oriented as one pleases, offer protection from the sun's rays any time of day. The concrete base guarantees stability and safety, even in windy conditions.
